Logic Model

A one-page plan from problem to change

Program _____ Date _____ Filled in by _____

Fill it in by number. Start with the situation and the change you want (boxes 1 to 4), then work back to what it takes (5 to 7). Read it left to right as a chain: if we have these, we can do this; if we do this, we can count that; if people take part, these changes follow.

01

The situation

PROBLEM AND CONTEXT

Who has the problem, what it is, and why now. One or two sentences.

WHAT IT TAKES — WHAT CHANGES

07

What we put in

INPUTS

People, partners, time, money, space, and materials the work needs.

05

What we do

ACTIVITIES

The main things the program does, in plain verbs.

06

What we can count

OUTPUTS

Sessions held, people reached, materials delivered.

04

Short-term change

OUTCOMES, WITHIN MONTHS

What people know, can do, or believe differently.

03

Longer-term change

OUTCOMES, A YEAR OR MORE

What people do differently, or how their situation changes.

02

The bigger goal

IMPACT

The change in the community or organization this contributes to.

08

What we are assuming

ASSUMPTIONS

What has to be true for this chain to work.

09

What is outside our control

OUTSIDE FACTORS

Conditions that could help or get in the way.

10

How we will know

MEASURES

One or two signs for the changes you most need to show: what, who collects it, and when.

Logic Model

A one-page plan from problem to change

Program	Date	Filled in by
Fix-It Saturdays (a made-up program, for illustration)	Example	Owner and two staff

An invented hardware store with eight staff wants fewer returned parts and more customers who come back. This page shows how the boxes connect, names no client, and reports no results.

01

The situation

PROBLEM AND CONTEXT

Who has the problem, what it is, and why now. One or two sentences.

Many customers buy parts for simple home repairs, then return them unused because they were unsure how to do the job. Staff answer the same questions at the counter every weekend, and the store has open floor space on Saturday mornings.

WHAT IT TAKES → WHAT CHANGES

07

What we put in

INPUTS

People, partners, time, money, space, and materials the work needs.

Two staff who teach, two hours per class including setup. The owner's time to plan the schedule. Floor space and a practice bench. Practice parts from a supplier. A small budget for printed cards and coffee.

05

What we do

ACTIVITIES

The main things the program does, in plain verbs.

A monthly one-hour Saturday class on one repair, hands-on with practice materials. A one-page how-to card for each repair. A question table at the counter after class.

06

What we can count

OUTPUTS

Sessions held, people reached, materials delivered.

Classes held. Attendees, from the sign-in sheet. How-to cards handed out. Questions answered at the table.

04

Short-term change

OUTCOMES, WITHIN MONTHS

What people know, can do, or believe differently.

Attendees can do one common repair on their own (a leaky faucet, a wall patch, a running toilet) and know which part and tool to buy before they start.

03

Longer-term change

OUTCOMES, A YEAR OR MORE

What people do differently, or how their situation changes.

Customers who attend come back for their next project. Fewer parts come back unused. Some regulars bring a neighbor.

02

The bigger goal

IMPACT

The change in the community or organization this contributes to.

Neighbors handle more small repairs themselves, and the store is where they come for help.

08

What we are assuming

ASSUMPTIONS

What has to be true for this chain to work.

Customers want to do small repairs themselves. Saturday morning works for them. Staff are comfortable teaching a small group.

09

What is outside our control

OUTSIDE FACTORS

Conditions that could help or get in the way.

Larger stores run their own classes. Weather and seasonal projects change turnout. Supplier donations may vary.

10

How we will know

MEASURES

One or two signs for the changes you most need to show: what, who collects it, and when.

The sign-in count each month (staff). A two-question check at the end of class: "Could you do this on your own now? What will you try next?" (staff). Unused-part returns each month, compared with the months before the classes, from the register (owner).
