Your voice card.
Drafts that sound like you.

A voice card is one page that tells any AI assistant how you sound: who you write for, the words you use and avoid, a few sentences in your voice, and what your writing never does. This tool interviews you for about ten minutes, then writes the card for you.

Option 1: Use it as a Claude skill

For Claude Pro, Max, Team, and Enterprise plans.

1. In Claude, open **Settings**, then **Capabilities**, and make sure **Code execution and file creation** is on.
2. In the **Skills** section, choose **Upload skill** and upload **strideforward-voice-card-skill.zip** as it is. Don't unzip it first.
3. Turn the **voice-card** skill on, start a new chat, and type **Make my voice card.**

Steps from the Claude Help Center article "Using Skills in Claude," checked October 21, 2026. Menus can change; search the Help Center for "skills" if yours look different.

Option 2: Any AI assistant

Open **strideforward-voice-card-prompt.txt**, copy the part between the two lines, and paste it into a new chat in ChatGPT, Gemini, Copilot, or Claude. Then answer the questions. Skip anything you like.

Once you have your card

- Save it in a note or document you can find again.
- Paste it at the start of a chat, or into your assistant's custom instructions or project instructions.
- Ask for drafts with it, then read every draft before it goes out.
- Update the card when your voice or your work changes.

Try: "Using my voice card, write a reply to this inquiry." Then paste the inquiry.

Or: "Using my voice card, turn these notes into a short post."

What you'll answer

Twelve short questions in four rounds: you and your people, how you sound, a sample of your own writing, and your rules.

Keep it private. Leave customers' and family members' names and personal details, account numbers, and passwords out of your answers and out of the card.
